MEETING MINUTES

DATE 27/10/2026 OBJECTIVE

PARTICIPANTS Andy Tiban, Nohemi Tocagon, Tomas Tapia, Danilo Simba

CONCLUSION

Im writing to share my thoughts after testing the latest version of Uni Helper. Overall, the program has definitely met my expectations All the core features, like the task tracking and schedule management, work wonderfully and do exactly what I need them to do. However, I really dont like the current interface. Right now, its just walls of text with no images or visual elements at all. Because it is so text-heavy, it actually makes the program a bit difficult to understand and navigate at first glance. I would much prefer a more dynamic and enganing interface. Adding some icons, images, and a better visual layout would make it mech more user-friendly and less tiring on the eyes.

The tool itself is excellent and works prefectly behind the scenes; it just needs a good visual upgrade to be complete. Let me Know how we can start working on these changes.
